

Glossary of Major CLF 3.0 Elements

General Notes

1. Many of the <div> containers in CLF3 are nested. You will see a series of divs with serial numerical identifiers grouped together and holding one page section. This is done to allow complex layout design principles to be applied to pages. It also allows some future design flexibility.
2. "Responsive" refers to the elements of CLF3 design that allow pages to be viewed across any screen size.

File: index.shtml

<div id="CLF_ON">: This div turns the default CLF styling ON or OFF. It is strongly recommended that this be left set to "ON." Any styling changes specific to a particular agency web site should be made to the CLF_agency_styles.css file.

<div id="mcauser1"><div id="mcauser2"><div id="mcauser3">: (Main Content Area User) These divs wrap the content area for the user's content and also apply appropriate margins and padding for content.

<section>: A new HTML5 div that can be used to call out a specific section of the page. We are using CLF3 it to wrap inner content and call out specific CLF3 styles.

<div id="mcauser_hdr1"><div id="mcauser_hdr2"><div id="mcauser_hdr3"><div id="mcauser_hdr4">: (Main Content Area User Header) These divs are for the text header (i.e. H1 tag) on every page. This should be used for the title of each page.
